

Certificate of Appreciation

To whom it may concern,

We would like to recognize the outstanding contribution, effort, and dedication of Ines Böhret to our team as a volunteer Expert research assistant for the CoronaNet Research Project. Ines Böhret has been active with our project since 2020-05-20 and, in that time, coded and updated policy information for Barbados, Comoros, Cyprus, Germany, Guinea, Indonesia, Kiribati, Liberia, Lithuania, Nepal, Palau, San Marino, Solomon Islands, Syria, Tanzania, United States, Vanuatu. Without the support of our dedicated RAs, such as Ines Böhret, we would not be able to sustain our pace of policy documentation which, to date, counts over 70 thousand policies from virtually every country in the world.

The CoronaNet Research Project is working to gather comprehensive and global data on government responses to the COVID-19 crisis. This work includes gathering information about which governments are responding to the coronavirus, toward whom policies are targeted (e.g. other countries), the types of policies enacted (e.g. travel restrictions, banning exports of masks) and their timing and duration. For more information, see www.coronanet-project.org.

Ines Böhret has been a country expert for Barbados, Comoros, Cyprus, Germany, Guinea, Indonesia, Kiribati, Liberia, Lithuania, Nepal, Palau, San Marino, Solomon Islands, Syria, Tanzania, United States, Vanuatu. This role involves researching and creating a comprehensive overview of government policies enacted in Barbados, Comoros, Cyprus, Germany, Guinea, Indonesia, Kiribati, Liberia, Lithuania, Nepal, Palau, San Marino, Solomon Islands, Syria, Tanzania, United States, Vanuatu as well as collecting and entering new and updated policy information related to COVID-19. Becoming a country expert requires passing a series of trainings on how to code data in the CoronaNet database, which uses a custom Qualtrics survey instrument, keeping up with policy coding on a weekly basis, and attending weekly country- or regional coordination meetings as well as project-wide meetings.

Based on their performance, RAs are promoted to Advanced and then to Expert RAs, which is the position held by Ines Böhret. This role involves coding an outstanding number of 250 policies or more and being engaged as a research assistant for at least 6 months. Expert research assistants have gained extensive knowledge of PHSM data and the CoronaNet dataset. They are actively involved in the development of the taxonomy and the project structure, and guide other research assistants. With their profound expertise, they play a fundamental role in the success of the project.

In addition to being a country expert, Ines Böhret took on the following additional roles within CoronaNet:

- **Senior Research Assistant Manager:** This role involves leading a group of RAs. It involves oversight and support of RAs, including conducting regular performance and activity appraisals to guarantee the development of a consistent and up-to-date dataset. Senior Research Assistant Managers are the first point of contact for RA questions regarding research and organizational issues. The role requires a profound knowledge of the construction of the dataset and strong leadership and management skills in order to foster a team spirit among the RAs, enhance their motivation, and develop a positive work environment.

08/03/2021

In conclusion, we would like to reiterate our thanks to Ines Böhret for supporting these important and time-sensitive collection efforts and for being part of the CoronaNet community.
